

WORLD ENERGY FORUM

New York, July 25, 2018

Mr. Tallat M. Azad
Storelectric Ltd.

Dear Mr. Azad,

As you may be aware, World Energy Forum is a global gathering of thought leaders from governments and corporations, as well as research and academic institutions to deliberate on innovations and advancement in energy and environment, and humanity's sustainable future. All nations and peoples are invited to participate.

This WEF2018 session is centered on renewable energy, environment, and sustainability, and part of this covers the very important topic of Advanced Energy Storage Technologies. There is and has been a growing consensus that without effective methods to store large quantities of energy for use on demand there would be problems in creating a resilient energy infrastructure and bringing cost savings to utilities and consumers. This session will explore the advancement of energy storage technology.

The event is co-hosted by the Inner Mongolia Autonomous Region People's government. Thanks to the generosity of the Inner Mongolia Autonomous Region People's Government, there will not be any registration fee to this world event.

I understand Storelectric Ltd. is developing new advanced and large scale compressed air energy storage technologies and you have been highly recommended as an expert in your field. As well as being an expert advocate for your own company, you have also a very good understanding how other companies are approaching the topic of energy storage, the regulatory issues behind this and some of the challenges this new asset class faces.

I would therefore like to extend an exclusive personal invitation for you to present in this session including participation on the expert panel Q&A that accompanies it.

Yours Sincerely,

A handwritten signature in blue ink, appearing to read "Harold H.S. Oh". The signature is fluid and cursive.

Dr. Harold Hyun Suk Oh
